Facts about Spina Bifida

Spina Bifida is the most common permanently disabling birth defect in the United States that causes mobility and functional challenges. The U.S. Public Health Service recommends that all women of child bearing age consume .4mg of folic acid prior to becoming pregnant and during the first trimester of pregnancy to reduce the risk of Spina Bifida.

The mission of the Spina Bifida Association of Delaware Valley is to promote the prevention of Spina Bifida and to enhance the lives of all affected through events such as the SBADV 5k.
